

Risque

Unsurpassed Underwriting Intelligence.

EVERYTHING ELSE IS OLD TECH.

Underwriters need a wealth of information at their fingertips. It should be just the right information, but nothing else, presented through an intuitive underwriting platform that's been made to match the way they think.

Risque from Quotech is underwriter-designed to do the job properly, and built to eliminate the pain points. It's the ultimate underwriting management tool.

BUILT-IN UNDERWRITING CONTROLS

ensure individuals write within their authority, companies accept only risks that match their appetite, and MGAs do not exceed the terms of their multiple binders.

A WEALTH OF DIRECT THIRD-PARTY DATA

enriches risk profiles and delivers live insights which confirm or enhance risk and claim presentations.

A COMPREHENSIVE CORPORATE DATA TREASURY

provides:

- a single, unequivocal source of truth for all users and functions
- a record of every risk from submission through quotation, binding, endorsements, and claims
- endlessly customisable management information
- massively simplified reporting and audits

UNLIMITED EXPANDABILITY

means that nothing restricts the number of classes, lines, and products that can be supported by Risque.

USER-DEFINED WORKFLOWS

facilitate instant interaction with other underwriters on the team, middle and back offices, brokers, capital providers and individual risk presented

BROKER PORTAL FUNCTIONALITY

can be incorporated easily to provide instant, automated quotes, underwriter referrals, policy binding, and endorsements.

DOCUMENTATION

including quotations, policies, and invoices, is generated automatically.

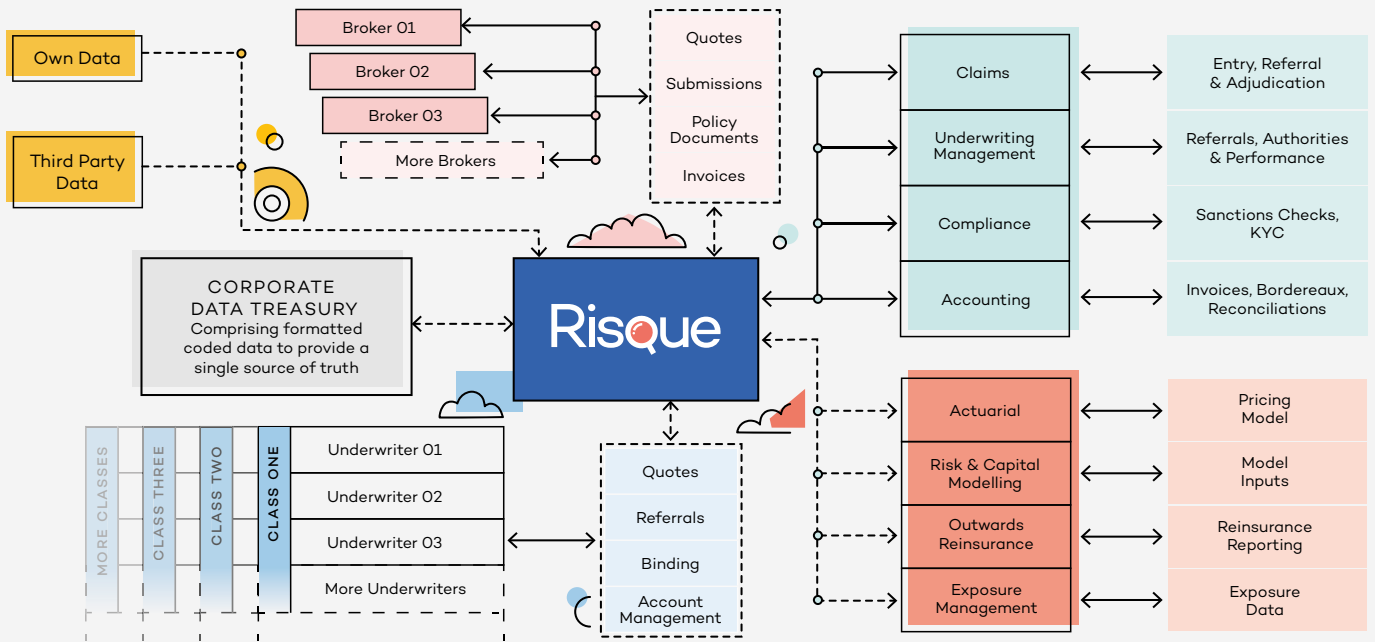

API CONNECTIONS

can be made to almost any other platform or third-party data source, inside or out.

Risque is the platform we always wanted as underwriters, but the tech-first software houses did not supply. Quotech clients liked our underwriter-driven, data-first technology. We continue to create and improve technological solutions in line with their needs and challenges.

With Risque, underwriters do more, more easily and faster. That lets them improve efficiencies, lower loss ratios, and reduce administrative costs. Everything else is obsolete.
